

WhiteDavid23

Developer Handover Pack

Partner Portal / Admission CRM System

Version 1.0 | Prepared for Development Team

1. Project Summary

This document defines the complete handover package for the WhiteDavid23 Partner Portal. The system will be a role-based CRM and admission management platform for partner academies, communities, counselors, and the super admin team.

The main objective is to help partners manage leads efficiently, improve follow-up discipline, track admissions, monitor commission, and increase overall conversion without confusion.

This handover pack is designed so a developer can estimate, plan, build, and test the project with minimal back-and-forth.

2. Business Objective

Centralize all partner leads and admissions in one system.

Allow each partner to access only their own data.

Give the super admin full visibility and control.

Improve admission conversion through reminders, status tracking, and ready-to-use sales tools.

Create a future-ready platform that can later support automation, WhatsApp integration, payment gateway, and analytics.

3. Scope of Work

In Scope:

Role-based login and access control.

Dashboard for super admin and partner admin.

Lead management, follow-up, admissions, and course tracking.

Marketing assets, commission tracking, reporting, notifications, and account settings.

Mobile responsive UI and exportable reports.

4. User Roles and Access Control

Role	Access Level	Key Permissions	Restrictions
Super Admin	Full system access	Approve partners, manage courses, assign leads, change permissions, view all reports, configure settings	None

Partner Admin	Own partner data	Add/update own leads, admissions, follow-ups, commission view, own reports	Cannot see other partners' data
Team Member / Counselor	Assigned records only	Work assigned leads, update notes, schedule follow-ups, change limited statuses	No full partner or system access
Support (Optional)	Service modules only	Handle tickets, verification, onboarding assistance	No admission or commission control

5. Recommended Modules

Dashboard: Summary cards, today tasks, recent activity, funnel snapshot, target progress.

Lead Management: Add lead, import leads, duplicate detection, lead score, status change, assigned owner.

Follow-up Center: Pending follow-ups, reminders, call logs, WhatsApp logs, next action.

Admissions: Pre-admission, fee discussed, partial/full payment, confirmed admission, canceled cases.

Courses: Course catalog, syllabus, fee structure, brochure, demo video, FAQs.

Marketing Center: Posters, captions, WhatsApp creatives, campaigns, testimonials.

Commission Center: Earnings, pending payout, paid payout, bonuses, withdrawal requests.

Reports & Analytics: Partner-wise, course-wise, source-wise, revenue, conversion, trend graphs.

Notification Center: Lead alerts, reminders, approvals, announcements, payment updates.

Account & Settings: Profile, password, security, theme, language, team members.

6. Screen List / Sitemap

- Login / Forgot Password
- Role-based Dashboard
- Lead List
- Lead Details
- Add / Edit Lead
- Follow-up Calendar
- Admissions List
- Admission Details
- Courses List
- Course Details
- Marketing Assets Library
- Commission Summary
- Reports Dashboard
- Notifications
- Profile / Settings
- Partner Approval (Super Admin)
- User & Role Management (Super Admin)

7. Core Workflows

Lead Flow: Lead is created -> assigned -> contacted -> follow-up scheduled -> demo/shared brochure -> fee discussion -> admission confirmed.

Partner Onboarding: Partner applies -> super admin verifies -> role is created -> partner gets access -> partner starts managing own leads.

Commission Flow: Admission marked complete -> commission calculated -> pending amount shown -> payout processed -> history updated.

Reporting Flow: System aggregates lead and admission data -> reports are filtered by date/course/partner -> export available.

8. Functional Requirements

The system shall support secure login with role-based authorization.

The system shall allow super admin to create, approve, suspend, and manage partners.

The system shall allow partner admins to manage only their own records.

The system shall support lead creation, editing, assignment, filtering, and search.

The system shall allow follow-up scheduling with due dates and status tracking.

The system shall support admission status updates with payment stages.

The system shall display course information and downloadable marketing assets.

The system shall calculate commission based on configured rules.

The system shall generate reports with filters by date, partner, course, and status.

The system shall be mobile responsive.

9. Non-Functional Requirements

Fast load time on mobile data and average internet connections.

Secure password handling and session management.

Scalable architecture for future automation and AI features.

Clean UI with clear hierarchy and minimum clicks.

Audit logs for sensitive actions such as lead transfer and approval.

Backup and restore strategy for database safety.

10. Validation and Business Rules

Mobile number should be validated before save.

Duplicate leads should be flagged.

Required fields should not be left blank.

Only valid status values should be allowed.

Only authorized roles can view commission and partner management screens.

Date-based reminders should follow the selected timezone and due date.

11. UI / UX Direction

Modern admin dashboard style.

Left sidebar navigation with collapsible sections.

Top summary cards and quick action buttons.

Professional spacing, readable typography, and responsive tables.

Color-coded status badges for leads and admissions.

Keep important actions visible within one or two clicks.

12. Data Fields by Module

Lead: Name, phone, WhatsApp, email, city, course interest, source, budget, priority, status, follow-up date, assigned to, notes.

Partner: Partner name, academy name, owner name, mobile, email, role, commission type, status, joining date.

Admission: Student name, course, fee, payment mode, payment status, joining date, remarks, documents.

Course: Course name, duration, fee, description, syllabus,

13. Super Admin Exclusive Features

Partner approval and rejection.

Global lead transfer.

Permission and role mapping.

All partner analytics.

System announcements.

Export/import of records.

Audit logs and activity tracking.

Fraud and duplicate detection.

14. Phase Plan / Future Scope

Phase	Features	Priority
Phase 1	Login, roles, dashboard, leads, follow-ups, admissions, reports	Must-have
Phase 2	Marketing center, commission module, notifications, export tools	High
Phase 3	WhatsApp integration, payment gateway, automation, reminders	Medium
Phase 4	AI lead scoring, predictions, smart suggestions, analytics	Future
Phase 5	LMS, quizzes, certificates, mobile app, franchise support	Advanced future

15. Acceptance Criteria

All roles should work as defined.

Partner should only see own data.

Search, filter, and status updates must work without errors.

Dashboard cards should reflect live counts.

Reports should be exportable.

Mobile layout should be usable on common Android screen sizes.

16. What the Developer Should Receive from You

Logo and brand colors.

Reference screenshots and preferred layout.

Course list and fee details.

Partner list and role mapping.

Sample leads and dummy data.
Final approval on phase priorities.

17. Recommended Technology Stack

Frontend: Next.js or React + Tailwind CSS

Backend: Node.js + Express Js

Database: MongoDB (NOSQL) or PostgreSQL(SQL)

Authentication: JWT with role-based access control

Hosting: Vercel/Netlify for frontend, Render/AWS/VPS for backend

18. Final Note

This handover pack is intended to reduce confusion, speed up development, and make the final product professional from day one. The more clearly the roles, flows, and field definitions are shared, the better the developer can build the system.
