1. Introduction

1.1 Purpose

This SRS defines the requirements for the WhiteDavid23 Partner Portal / CRM System. The system will allow super admins, partner admins, team members, and support users to manage leads, admissions, follow-ups, marketing assets, commissions, and performance reports in one platform.

1.2 Scope

The platform is a multi-tenant web application where each partner academy or community sees only its own data, while the super admin has global visibility and control. The product is intended to improve admission conversion through structured workflows, analytics, reminders, and campaign tools.

1.3 Definitions, Acronyms, and Abbreviations

- CRM: Customer Relationship Management
- RBAC: Role-Based Access Control
- Lead: A prospective student or enquiry
- Admission: A successfully converted student enrollment
- Partner: An academy, community, or channel partner associated with WhiteDavid23
- Hot Lead: A lead with high intent and urgent follow-up requirement

1.4 References

- IEEE-style software specification structure
- Business requirements discussed for WhiteDavid23 partner operations
- Modern CRM and sales pipeline best practices

2. Overall Description

2.1 Product Perspective

The portal is a cloud-hosted web system with a responsive dashboard, role-based modules, and workflow automation. It can later be extended into a mobile app and connected to WhatsApp, email, payment gateways, and LMS components.

2.2 Product Functions

- Partner onboarding and approval
- Lead capture, assignment, and tracking
- Follow-up scheduling and reminders
- Admission status management
- Course catalog and promotional assets
- Commission and payout tracking
- Reports, analytics, and leaderboard
- Notifications and announcements

2.3 User Classes

- Super Admin: Full system control
- Partner Admin: Own partner workspace management
- Team Member/Counselor: Assigned lead operations
- Support User: Limited support and verification actions

2.4 Operating Environment

- Web browser on mobile, tablet, and desktop
- Backend API hosted on a cloud or VPS environment
- Database hosted on managed database service
- Optional integrations with WhatsApp, email, and payment services

2.5 Design and Implementation Constraints

- Each partner must see only authorized data
- Audit logging is required for sensitive actions
- UI must be responsive and fast on low-end mobile devices
- Data export and import must preserve record integrity

3. User Roles and Access Control

Role	Main Access	Typical Actions	Data Visibility
Super Admin	All modules	Approve partners, manage settings, global reports, lead transfer	All data
Partner Admin	Partner workspace	Manage own leads, admissions, team, reports, commissions	Own partner data
Team Member	Assigned tasks/leads	Follow-up, notes, status updates, limited conversion actions	Assigned records only
Support User	Support tools	Ticketing, verification, assistance	Limited operational data

Access rules:

- RBAC must prevent unauthorized viewing or editing of records.
- Every sensitive action must be recorded in the audit log.
- User role changes must be available only to the super admin.
- Partner data must be logically separated by tenant/partner ID.

4. Product Scope

- The system is designed to convert leads into admissions efficiently.
- The system reduces manual follow-up loss through reminders and task lists.
- The system provides partner performance visibility to encourage accountability.
- The system supports marketing asset distribution to help partners close more admissions.

5. Functional Requirements

5.1 Authentication and Account Management

- Users shall sign in using email/username and password.
- The system shall support password reset and account recovery.
- The system shall allow two-factor authentication in future releases.
- The system shall record last login, device, and session activity.

5.2 Partner Onboarding and Approval

- Super admin shall create and approve partner accounts.

- Partner admins shall complete profile, academy details, and commission details.
- The system shall allow partner status values such as pending, active, suspended, and rejected.

5.3 Dashboard Home

- The dashboard shall show total leads, hot leads, demo booked, admissions, pending follow-ups, and commission metrics.
- The dashboard shall display today's tasks, urgent leads, and recent activity.
- The dashboard shall show target progress and conversion rate.

5.4 Lead Management

- Users shall add, edit, import, search, filter, archive, and duplicate-check leads.
- Each lead shall have name, phone, email, city, source, course interest, budget, priority, status, follow-up date, and notes.
- The system shall support lead scoring and pipeline stages.

5.5 Follow-up Management

- The system shall maintain follow-up history for every lead.
- The system shall support due, overdue, and snoozed follow-ups.
- Users shall mark outcomes such as connected, no response, call later, interested later, demo booked, and lost.

5.6 Admission Management

- The system shall convert qualified leads into admissions.
- Admission records shall include payment mode, payment status, joining date, and verification details.
- Users shall track partial and full payment cases.

5.7 Course Management

- Super admin shall create and update course information.
- Each course shall have fee, duration, syllabus, brochure, demo link, benefits, and FAQ.
- Partners shall share course assets directly from the portal.

5.8 Marketing Center

- The system shall provide downloadable and shareable creatives such as posters, banners, reels captions, and WhatsApp templates.
- Marketing items shall be categorized by course, campaign, and language.
- The system shall support campaign asset tracking in future versions.

5.9 Campaign Center

- The system shall allow broadcast campaigns through supported channels in future releases.
- Campaign results shall capture sent, delivered, opened, clicked, and converted metrics.

5.10 Commission and Payouts

- The system shall compute earned, pending, and paid commission amounts.
- The system shall support milestone bonuses and payout requests.
- Commission history shall be viewable per partner and per admission.

5.11 Reports and Analytics

- The system shall generate daily, weekly, monthly, yearly, partner-wise, course-wise, source-wise, and city-wise reports.
- The system shall show charts for funnel, conversion, revenue, and performance trends.

- Super admin shall export reports in CSV/Excel/PDF formats.

5.12 Notifications and Announcements

- The system shall send reminders for follow-ups, demos, fee due items, and commission updates.
- Super admin shall publish announcements to all partners or selected partners.

5.13 Audit and Activity Logs

- The system shall track important events such as login, record change, role change, and payout approval.
- Audit logs shall be viewable by super admin only.

6. Data Requirements

6.1 Core Entities

- User
- Partner
- Role
- Lead
- Lead Activity
- Follow-up Task
- Admission
- Course
- Creative Asset
- Campaign
- Commission Record
- Notification
- Audit Log

6.2 Key Data Fields

- User: id, name, email, phone, password hash, role, status
- Partner: id, academy name, logo, contact details, address, approval status
- Lead: id, student name, phone, course interest, source, status, score, owner partner id
- Follow-up Task: id, lead id, due date, priority, reminder status, outcome
- Admission: id, lead id, student id, payment status, joining date, amount, commission
- Course: id, title, duration, fee, syllabus link, brochure link, demo link

7. User Interface Requirements

- Responsive design for mobile-first usage.
- Left navigation menu for major modules and quick actions.
- Card-based dashboard with filters and summary charts.
- Table views with search, sort, filter, and bulk actions.
- Lead detail page with timeline and next action buttons.
- Consistent visual hierarchy and WhiteDavid23 branding.

8. External Interface Requirements

- Web browser compatibility: Chrome, Edge, Firefox, and mobile browsers.
- Optional WhatsApp and email integration for sending messages and reminders.

- Optional payment gateway integration for fee collection.
- Optional cloud storage for documents and creatives.
- API endpoints for future mobile app and integration partners.

9. Non-Functional Requirements

9.1 Performance

- Common dashboard screens should load quickly on typical mobile internet.
- Search and filtering should respond with minimal delay.
- Bulk operations should be processed asynchronously when needed.

9.2 Security

- Passwords shall be hashed securely.
- Role-based authorization shall protect all endpoints.
- Sensitive actions shall require audit logging.
- Data export shall be controlled by permission.

9.3 Reliability

- The system shall maintain data consistency on network interruption.
- Backups shall be scheduled regularly.
- Recovery procedures shall be documented.

9.4 Usability

- The interface shall be simple enough for non-technical partner users.
- Common tasks shall be reachable within few clicks.
- Empty states should guide the user with clear actions.

9.5 Scalability

- The system should support more partners, leads, and campaigns without redesign.
- Database and API architecture should allow horizontal scaling later.

9.6 Maintainability

- Code should be modular by feature and service.
- Configuration values should be externalized.
- Logs and error traces should support support-team debugging.

10. Business Rules

- A partner can access only its own tenant data.
- A lead cannot be marked admitted without an admission record.
- Duplicate leads should be flagged based on phone/email matching.
- Commission rules may differ by course or partner category.
- Every lead should have a next follow-up date or a closed reason.
- Refund or cancellation cases should remain visible in reports.

11. Use Cases

- UC-01 Partner Login: A partner logs in and sees only its own dashboard, leads, follow-ups, and reports.

- UC-02 Add Lead: A user creates a new lead with contact details, course interest, and follow-up date.
- UC-03 Convert Lead to Admission: A hot lead is converted into a verified admission after fee confirmation.
- UC-04 Send Brochure: A user shares the relevant brochure or fee sheet through available communication channel.
- UC-05 View Reports: A partner or super admin filters reports by date, course, or partner.
- UC-06 Manage Commission: A partner checks earned, pending, and paid commission amounts.
- UC-07 Approve Partner: A super admin reviews and activates a new partner request.

12. Validation and Acceptance Criteria

- Login succeeds only for valid credentials and active accounts.
- Partner users cannot access other partner records.
- Lead creation stores all mandatory fields correctly.
- Follow-up reminders appear on the scheduled date/time.
- Admission data updates reflect in conversion and revenue reports.
- Commission totals match the configured business rule.
- Exported reports contain the expected filtered data.

13. Future Enhancements

- WhatsApp Business API automation
- Email and SMS campaign engine
- Payment gateway and invoice automation
- AI lead scoring and next-best-action suggestions
- Mobile application for partners
- LMS / recorded class integration
- Certificate generation
- Multi-branch and franchise support
- Advanced workflow automation
- Voice assistant and smart reminders

14. Assumptions and Dependencies

- Partner users have access to internet and a modern browser.
- WhiteDavid23 will define final commission policy and course catalog.
- Third-party messaging or payment integrations may require external accounts and APIs.
- Partner identity verification will be managed by super admin.

15. Risks

- Poor follow-up discipline may reduce conversion despite software availability.
- Duplicate or incomplete lead data can affect reporting quality.
- Integration failures can delay communication workflows.
- Low partner adoption may require onboarding and periodic review.

16. Appendix

16.1 Suggested MVP Priority

- Role-based login
- Partner dashboard
- Lead management
- Follow-up center
- Admission module
- Course module
- Commission module
- Reports and notifications

16.2 Recommended Technology Stack

- Frontend: React or Next.js with Tailwind CSS
- Backend: Node.js with Express
- Database: MongoDB or PostgreSQL
- Authentication: JWT + RBAC
- Hosting: Vercel, Render, AWS, or VPS

16.3 Final Note

This SRS is intended to serve as a development-ready foundation. A UI wireframe, database schema, API specification, and sprint plan can be derived directly from this document.
